EDUCATION

University of Florida | *Gainesville, Florida* | **August 2023 – December 2027 [Expected]**
Bachelor of Science in Mechanical Engineering

TECHNICAL SKILLS

CAD & Design: SolidWorks (Parts, Assemblies, Drawings, GD&T, FEA), Fusion 360
Programming & Analysis: MATLAB, Python, LabVIEW
Manufacturing: Mill & Lathe operation, Soldering, 3D printing (FDM), Drill Press, Bandsaw, Sheet Metal Bending
Software & Tools: Microsoft Office, GitHub, Arduino IDE

TECHNICAL EXPERIENCE

Gator Robotics — Mechanical Engineering Team Member **March 2026 – Present**
University of Florida | *Gainesville, FL* |

- Designing a 1 lb antweight combat robot: completed concept sketches, full SolidWorks model, and cost analysis; fabrication begins January 2027
- Selected a tracked drivetrain over wheels for traction, based on Off-Highway Vehicles coursework, with dual planetary gearmotors and a horizontal spinner weapon
- Specified thin-gauge aluminum armor over a 3D-printed chassis to protect against impacts while staying under the 1 lb weight limit
- Assisted with a teammate's competition robot build upon joining (March 2026), including threading, 3D printing, assembly, and wiring; applied what I learned to my own design for manufacturability

PROJECTS

Air Engine Powered Food Slicer

- Designed and modeled in SolidWorks a compressed-air-powered food slicer in which a belt from the engine flywheel drives a shaft and food-safe stainless steel blade, held by two connecting rod supports and shielded by an aluminum guard over the top and back
- Designed an L-bracket-adjusted slotted aluminum plate with 10+ lockable slice-thickness settings, and selected an off-the-shelf blade to preserve the custom-part allowance and ensure consistent sharpness
- Met a $100 budget cap and 4-12 part limit (BOM: $92.10) and beat three competing concepts in a weighted decision matrix; independently authored part and assembly drawings and a manufacturing process plan (~196 min est. build time)

Air Engine Manufacturing

- Collaborated on a 4-person engineering team to revise part drawings for repeatable manufacturing, applying GD&T and design for manufacturing (DFM) principles
- Machined the flywheel, base, piston, and piston block on a manual mill and lathe and hand-tapped threads, building 2 compressed air engines with interchangeable parts that both ran when tested at 15 psi

Cantilever Beam Strain Gauge Scale (LabVIEW)

- Built and calibrated a cantilever beam scale to measure weight using strain-gauge voltage and beam mechanics, comparing experimental calibration against theoretical load calculations.
- Independently developed LabVIEW VIs to collect sensor data and calibrate the scale using known weights from 100–400 g; achieved a standard deviation of 0.0073 N across 10 repeated measurements.
- Performed a 10,000-run Monte Carlo uncertainty analysis in Excel to evaluate measurement uncertainty, with the simulated calibration slope matching the experimental result within 0.04%.

Arduino-Based Light-Tracking Servo (Closed-Loop Control)

- Applied concepts from Control of Dynamic Systems to design a closed-loop Arduino light-tracking servo, using two photoresistors as sensor input and a tuned proportional controller in embedded C++ for smooth tracking without oscillation
- Added a deadband and millis()-based timing to eliminate jitter; documented the system with a block diagram and wiring diagram in my portfolio.

INVOLVEMENTS

UF American Society of Mechanical Engineers (ASME) **September 2024 – Present**

- Participated in engineering workshops, design projects, and networking events

University of Florida Tennis Club **August 2023 – Present**

WORK EXPERIENCE

Dwight's Bistro – Busser | *Jacksonville Beach, FL*| **July 2022 – January 2026**
