EDUCATION

University of Florida, | *Gainesville, Florida* |

August 2023 – December 2027 [Expected]

- Bachelor of Science in Mechanical Engineering

TECHNICAL SKILLS

CAD & Design: SolidWorks (Parts, Assemblies, Drawings, GD&T, FEA), Fusion 360

Programming & Analysis: MATLAB, Python, LabVIEW, Data Visualization

Manufacturing: Mill & Lathe operation, Soldering, 3D printing (FDM), Drill Press, Bandsaw, Sheet Metal Bending

Software & Tools: Microsoft Office, GitHub, Arduino IDE

PROJECTS

Air Engine Powered Food Slicer

- Designed a compressed-air-powered food slicer driven by a dual-action two-stroke air engine, meeting strict constraints on manufacturability, safety, food-safe materials, part count, and a \$100 budget cap — delivered at \$93
- Engineered a fully constrained mechanical system with adjustable, lockable slice thickness and sufficient stroke to cut common foods, integrating directly with an existing flywheel/piston interface
- Produced manufacturing-ready documentation (detailed part and assembly drawings, tolerances, BOM, inspection criteria, and ECNs), applying DFMA principles to support repeatable small-batch production

SolidWorks Mechanical Design Project

- Designed the chassis and frame as part of a 3-person team building a 20+ component 4functioning robot, producing 2D technical drawings and a full 3D assembly in SolidWorks
- Produced manufacturing-style drawings (dimensioned & GD&T) for a fully constrained assembly
- Produced a video presentation showcasing assembly process, functionality, and design decisions

Arduino-Based Automated Animal Feeder

- Independently designed, built, and presented an Arduino-controlled feeder that automatically dispenses food at programmed intervals
- Programmed a servo motor to rotate a set number of degrees per feeding cycle, with adjustable timing in the Arduino code
- Integrated LED and buzzer signals to indicate feeding cycles and system readiness

TECHNICAL EXPERIENCE

Gator Robotics — Mechanical Engineering Team Member

University of Florida | *Gainesville, FL* |

March 2026 –Present

- Collaborate with a multidisciplinary team of mechanical, electrical, and software members to design, build, and test competitive robotic systems
- Design and model mechanical components and subassemblies in SolidWorks, applying GD&T and DFM principles to ensure parts are manufacturable under competition timelines
- Manufacture and assemble components using 3D printing, machining, and hand tools, translating CAD models into functional hardware
- Test robotic mechanisms under competition conditions, diagnose failures, and iterate designs based on performance data
- Gained hands-on experience with rapid prototyping cycles, design-for-manufacturing trade-offs, and integrating mechanical systems with electrical and software subsystems

INVOLVEMENTS

UF American Society of Mechanical Engineers (ASME)

September 2024—Present

- Participated in engineering workshops, design projects, and networking events

University of Florida Tennis Club

August 2023—Present

WORK EXPERIENCE

Dwight's Bistro – Busser | *Jacksonville Beach, FL* |

July 2022 – January 2026
