EDUCATION

University of Florida | *Gainesville, Florida* |

August 2023 – December 2027

Bachelor of Science in Mechanical Engineering

GPA: 3.19

TECHNICAL SKILLS

CAD & Design: SolidWorks (Parts, Assemblies, Drawings, GD&T, FEA), Fusion 360

Programming & Analysis: MATLAB, Python, LabVIEW, Data Visualization

Manufacturing: Mill & Lathe operation, Soldering, 3D printing (FDM), Drill Press, Bandsaw, Sheet Metal Bending

Software & Tools: Microsoft Office, GitHub, Arduino IDE

TECHNICAL EXPERIENCE

Gator Robotics — Mechanical Engineering Team Member

March 2026 – Present

University of Florida | *Gainesville, FL* |

- Designed a 1 lb antweight combat robot from paper sketches through a SolidWorks model, with a 3D-printed plastic chassis armored in lightweight aluminum sheet for stability and protection
- Selected a tracked drivetrain for traction (based on Off-Highway Vehicles coursework) with two Mini Brushed Mk2 planetary gearmotors, and a Repeat 2822 Mk3 motor driving a horizontal spinner blade
- Design and model mechanical components and subassemblies for competitive robots in SolidWorks, applying GD&T and DFM principles
- Manufacture parts from carbon fiber, UHMW, aluminum, and titanium using 3D printing, CNC routing, waterjet cutting, machining, and hand tools

PROJECTS

Air Engine Powered Food Slicer

- Designed and modeled in SolidWorks a compressed-air-powered food slicer in which a belt from the engine flywheel drives a shaft and food-safe stainless steel blade, held by two connecting rod supports and shielded by an aluminum guard over the top and back
- Designed an L-bracket-adjusted slotted aluminum plate with 10+ lockable slice-thickness settings, and selected an off the shelf blade to preserve the custom-part allowance and ensure consistent sharpness
- Met a \$100 budget cap and 4–12 part limit (BOM total: \$92.10); evaluated against three competing concepts in a weighted decision matrix
- Independently authored part and assembly drawings and a manufacturing process plan (about 196 min estimated build time).

Air Engine Manufacturing

- Revised part drawings for repeatable manufacturing, applying GD&T and design for manufacturing principles
- Machined the flywheel, base, piston, and piston block of a compressed air engine on a manual mill and lathe, and hand threaded parts.

SolidWorks Mechanical Design Project

- Designed the chassis and frame and battery as part of a 3-person team building a 25+ component functioning robot, producing 2D technical drawings and a full 3D assembly in SolidWorks.
- Created dimensioned, GD&T drawings for a fully constrained assembly and a video presentation of the design.

Arduino-Based Light-Tracking Servo (Closed-Loop Control)

- Applied concepts from Control of Dynamic Systems to design a closed-loop Arduino light-tracking servo, using two photoresistors as sensor input and a tuned proportional controller in embedded C++ for smooth tracking without oscillation
- Added a deadband and millis()-based timing to eliminate jitter; documented the system with a block diagram and wiring diagram in my portfolio.

INVOLVEMENTS

UF American Society of Mechanical Engineers (ASME)

September 2024 – Present

- Participated in engineering workshops, design projects, and networking events

University of Florida Tennis Club

August 2023 – Present

WORK EXPERIENCE

Dwight's Bistro – Busser | *Jacksonville Beach, FL* |

July 2022 – January 2026
